## ENERGY & FI

*"From Light towards the sustainability of Life" ...*

Sustainable energy is always essential for the future of mankind because of increasing price of petroleum products like LPG, Petrol. Sustainable energy is the only solution that can protect our nature and our life. We know that traditional energy sources are producing pollution and hazardous effects to our planet earth and sustainable energy can prevent us from pollution and negative effects.

### GOAL

In sustainable energy solar plays primer and important role because it is highly customizable, ease of maintenance compared to other renewable energy source. As we know that day by day application of solar energy is increasing so there is need to generate more job opportunities for future as well there is need of training more manpower in this sector to work.
